Prospex takes to the skies with the Radio Sync Solar World Time Chronograph

Precision in flight. SSG001

Precision and reliability

Precision and reliability. These qualities, above all else, are what all pilots need from the watches that they take with them into the skies. The new Prospex Radio Sync Solar World Time Chronograph offers a precision of one second every 100,000 years and the reliability of a solar powered caliber that never needs a battery change. A new standard in watches for pilots is set.

A new Radio Wave caliber

The three new models in this collection feature a new, more powerful radio wave caliber, which can receive time signals across a much wider geographic area than ever before, delivering greatly enhanced coverage in Europe and China, as well as throughout the USA and Japan. When conditions allow, the time is synchronized automatically, up to three times a day, to the atomic clock signals broadcast in Japan, USA, China and Germany, and, of course, this adjustment can also be done manually, at any time and at the press of a single button.

Radio Wave technology, optimized for pilots

In addition to radio wave precision, these new creations offer the professional specifications with which Prospex is synonymous, optimized for pilots who fly, professionally or for pleasure, all over the world. Caliber 8B92 features world time and chronograph functions. It displays 25 time zones and a rotary slide rule on the bezel allows easy calculations and conversion of distance, fuel load, weight and speed. Their exterior design is also made with the real-life needs of the pilot in mind. The bezel edging is designed

to be easy to grip. The top surfaces of the buttons on the 3 o'clock and 9 o'clock sides of the case are different, thus minimizing the risk of pressing the wrong button. Those on the 3 o'clock side control the stopwatch while those on the 9 o'clock side are for the radio sync and world time functions. The hands and indices are coated with Lumibrite and the Hardlex crystal has an anti-reflective coating, all to ensure high legibility, at a single glance.

All three models will be available in store in August 2016.

Prospex: Challenging every limit

Prospex was launched internationally just two years ago and has already established a global reputation as a world-leading sports watch that can be trusted in even the most challenging environments. Whether your profession or sport is on land, in the sky or in the water, Prospex has what it takes.

Caliber Specifications: 8B92, Radio Sync Solar World Time Chronograph

Standard radio signal reception from the transmitting stations in Japan, United States, Germany and China
 Hour, minute and second hands with date, 24 hour hand
 World time function (25 time zones)
 Power saving function
 Chronograph up to 60 minutes in 1/5 second, Split time measurement
 Full auto calendar up to 2099
 Accuracy: +/- 15 seconds per month (without receiving a radio signal and at temperatures between 5°C and 35°C)

Specifications:

Stainless steel case and bracelet (SSG001)
 Stainless steel case and bracelet with black hard coating (SSG003)
 Stainless steel case and calf leather strap (SSG005)
 Screw-down crown
 Water resistance: 10 bar
 Diameter: 47.8mm, Thickness: 14.5mm
 Three-fold clasp with push button release and secure lock (SSG001, 003)
 Approximate recommended retail price range in Europe: 640 to 730 Euro
