

Long live the King!

The 1960's was a decade of unprecedented advances for Seiko, both in terms of technical development and design creativity. Alongside Grand Seiko, one other series in particular demonstrated the company's ability to create beautifully designed and finished mechanical watches with high accuracy. It was called King Seiko. In addition to its precision, it offered a powerful yet graceful design that symbolized the high quality of its construction. Today, King Seiko is back; renewed, technologically enhanced and yet just as strikingly beautiful as it was half a century ago.
