For proper and safe use of your watch, please read the instructions carefully in this booklet before using the watch. Keep this manual handy for easy reference.

- Length adjustment service for metal band is available at the retailer from whom the watch was purchased. If you cannot have your watch repaired by the retailer from whom the watch was purchased because you received the watch as a gift, or you moved to a distant place, please contact a SEIKO CUSTOMER SERVICE CENTER. The service may also be available on a chargeable basis at other retailers, however, some retailers may not undertake the service.
- The pre-installed battery is used to check the function and performance of the watch. You will be charged for battery replacement even if the battery runs down within the guarantee period.
- If your watch has a protective film for preventing scratches, make sure to peel it off before using the watch. If the watch is used with the film on it, dirt, sweat, dust, or moisture may be attached to the film and may cause rust.

### FEATURES

This is a multi-display analogue watch featuring a stopwatch function.

**8T63**
- Indicated by the hour, minute, second and 24-hour hands.
- The stopwatch can measure up to 60 minutes in 1/5 second increments. After 60 minutes, it will automatically be stopped.

**8T67**
- Indicated by the hour, minute, second hands.
- The stopwatch can measure up to 12 hours in 1/5 second increments. After 12 hours, it will automatically be stopped.

### DISPLAY AND CROWN/BUTTON OPERATION

**Cal.8T63**

**STOPWATCH 1/5-second hand**

**STOPWATCH minute hand**

**Hour hand**

**Small second hand**

**STOPWATCH 1/5-second hand**

**STOPWATCH 1/5-second hand**

**Cal.8T67**

**STOPWATCH 1/5-second hand**

**STOPWATCH 1/5-second hand**

**STOPWATCH hour hand**

**Hour hand**

**Small second hand**

**STOPWATCH minute hand**

**STOPWATCH 1/5-second hand**

**STOPWATCH 1/5-second hand**

**Crown**

**Button A**

**Button B**

**Button C**

0: Normal position
1: First click
2: Second click
**CROWN**

There are two types of crown, a normal crown and a screw-lock type crown. Please check the type of the crown of your watch.

- **Normal crown**
  - Pull out the crown and operate it.

- **Screw-lock type crown**
  - Unlock the crown before operating it.
  - After operating the crown, lock it.
  - While pressing the crown in, turn it in the direction indicated by the arrow.
  - The crown turns.
  - The crown does not turn. (It cannot be turned any further.)

※ If your watch has a screw-lock type crown, the crown screws into the watch to prevent malfunction and increase water resistance.
※ Be careful not to screw the crown in by force as it may damage the slots of the crown.

**SETTING THE TIME**

1. When the stopwatch is on or has been measuring, if the crown is pulled out to the second click, the stopwatch will continue the current measurement.
2. The 24-hour hand moves correspondingly with the hour hand. ※8T67 does not have 24-hour hand.
3. The moment the date changes is midnight. When setting the hour hand, make sure to check that AM/PM is correctly set by using the 24 hour hand as an AM/PM indicator.
4. When setting the minute hand, first advance it 4 to 5 minutes ahead of the desired time and then turn it back to the exact minute.

**SETTING THE DATE**

- Before setting the date, be sure to set the time.

1. Date setting should always be carried out after the time is correctly set.
2. Manual date adjustment is required on the first day after a month that has less than 31 days: February, April, June, September and November.
3. Do not set the date during any time between 9:00 P.M. and 3:00 A.M. Date setting during this time period may cause failure of date change on the following day.
STOPWATCH

8T63
- The stopwatch can measure up to 60 minutes in 1/5-second increments.
- After measuring 60 minutes, the stopwatch will automatically stop.
8T67
- The stopwatch can measure up to 12 hours in 1/5 second increments.
- After measuring 12 hours, the stopwatch will automatically stop.
- Before using the stopwatch, be sure to check that the STOPWATCH hands are reset to the "0" position.

(How to reset the stopwatch)
While the STOPWATCH hands are moving:
1. Press Button A to stop the stopwatch.
2. Press Button B to reset the stopwatch.
While the STOPWATCH hands are stopped:
1. Press Button B to reset the stopwatch.

Standard measurement

START A → STOP A → RESET B

Accumulated elapsed time measurement

START A → STOP / RESTART A/A → STOP A → RESET B

*Restart and stop of the stopwatch can be repeated by pressing button A.

1. You may feel that the buttons of the watch are harder to press compared with those of conventional watches. This is due to the special construction needed for the stopwatch function; therefore, is not a malfunction.
2. While the stopwatch is measuring, pressing button B will reset the stopwatch. Be careful not to press button B by mistake.

MODELS WITH TACHYMETER

HOW TO USE THE TACHYMETER (For the models with a tachymeter scale on the dial or bezel):
- The tachymeter can be used to measure the hourly average speed of a vehicle and the hourly rate of operation.

1. Use the stopwatch to determine how many seconds it takes to go one kilometer.
2. Read the tachymeter scale where the second hand points.

80km/h

1. Use the stopwatch to measure the time required to complete one product.
2. Read the tachymeter where the second hand points.

80 products/hour

To measure the hourly average speed of a vehicle:

To measure the hourly rate of operation:

**For solution of troubles other than those above, contact the retailer from whom the watch was purchased.**

REMARKS ON THE BATTERY

1. Battery Life
   When a new normal battery is installed, this watch operates for approximately three years. However, if the stop watch is used for more than 60 minutes a day, the battery life may be less than three years.

2. Monitor battery
   The battery in your watch may run down in less than two years after the date of purchase, as it is a monitor battery, which is inserted at the factory to check the function and performance of the watch.

3. Battery life indicator
   When the battery nears its end, the small second hand moves at two-second intervals instead of normal one-second intervals. In that case, have the battery replaced with a new one as soon as possible.

4. Battery change
   - For battery replacement, be sure to have the battery replaced with a new one at the retailer from whom the watch was purchased, and request only use a genuine SEIKO battery.
   - If the old battery is left in the watch for a long time, a malfunction may be caused due to battery leakage, etc. Have it replaced with a new one as soon as possible.
   - If there is a charge for battery replacement even if the battery runs down within the guarantee period.
   - Once the case back is opened for battery replacement or other purposes, the original water resistant quality designed for the watch may deteriorate when it is closed. When you have the battery replaced with a new one, also request a water resistance test pertaining to the water resistant quality of your watch. If your watch has a 10-bar or higher water resistant quality, be sure to have such test performed on the watch every time the battery is replaced.

**WARNING**

- Do not remove the battery from the watch.
- If it is necessary to take out the battery, keep it out of the reach of children.
- If a child swallows it, consult a doctor immediately as it will adversely affect the health of the child.

- Never short-circuit, tamper with or heat the battery, or never expose it to fire as it may explode, generate and intense heat or catch fire.
- The battery in your watch is not rechargeable. Never attempt to recharge it, as this may cause battery leakage or damage to the battery.
- If the watch is left in a temperature below -5°C or above +35°C for a long time, the battery leakage may result, causing the battery life to be shortened.

SPECIFICATIONS

1. Frequency of crystal oscillator: 32,768 Hz (Hz = Hertz... Cycles per second)
2. Loss/gain (monthly rate): Less than 15 seconds when the watch is worn on your wrist (5°C–35°C)
3. Operational temperature range: -5°C ~ +50°C
4. Driving system: Step motor, 2 pieces
5. Display system: [Time function]
   - Hour and minute hands with a small second hand that moves at one-second intervals
   - [Stopwatch function]
     - 8T63
     - Stopwatch second hand turns a full circle in 60 seconds at 1/5-second intervals.
     - Stopwatch minute hand turns a full circle in 60 minutes at one-minute intervals.
     - 8T67
     - Stopwatch second hand turns a full circle in 60 seconds at 1/5-second intervals.
     - Stopwatch minute hand turns a full circle in 60 minutes at one-minute intervals.
     - Stopwatch hour hand turns a full circle in 12 hours at one-hour intervals.
6. Battery: Miniature silver oxide battery SB-A4, 1 piece (SH9363W)
7. Battery life: Approx. 3 years if the stopwatch is used for less than 60 minutes a day
8. IC (Integrated Circuit): Approx. 3 years if the stopwatch is used for less than 60 minutes a day

**The above specifications are subject to change without prior notice for product improvement.**
TO PRESERVE THE QUALITY OF YOUR WATCH

**WARNING**
- Immediately stop wearing the watch in the following cases:
  - If corrosion appears on the watch body or band, etc.
  - If the pins protrude from the band.
- Immediately consult the retailer from whom the watch was purchased or a SEIKO CUSTOMER SERVICE CENTER.
- Keep the watch and accessories out of the reach of babies and children.
- Care should be taken to prevent a baby or a child accidentally swallowing any accessories.
- Do not use the watch for scuba diving or saturation diving.
- The various inspections under simulated harsh environments, which are usually required for watches designed for scuba diving or saturation diving, have not been conducted on a water-resistant watch with a BAR (barometric pressure) display. For diving use special watches.

**CAUTION**
- Avoid wearing or storing the watch in the following places:
  - Places where volatile agents (cosmetics such as polish remover, insect repellent, thinners, etc.) are vaporizing
  - Places where the temperature drops below 5°C or rises above 35°C for a long time
  - Places of high humidity
  - Places affected by strong magnetism or static electricity
  - Dusty places
  - Places affected by strong vibrations
- For watches with batteries, do not leave a dead battery in the compartment for a long time as it may cause battery leakage.
- If you observe any allergic symptoms or skin irritation, stop wearing the watch immediately and consult a specialist such as a dermatologist or an allergist.
- Do not let running water from a faucet hit the watch.
- The water pressure of tap water from a faucet is high enough to degrade the water resistant performance of a water resistant watch for everyday use.
- Do not turn or pull out the crown when the watch is wet; water may get inside of the watch.
  - If the inner surface of the glass is clouded with condensation or water droplets appear inside of the watch for a long time, the water resistant performance of the watch is deteriorated. Immediately consult the retailer from whom the watch was purchased or a SEIKO CUSTOMER SERVICE CENTER.
- Do not leave moisture, sweat and dirt on the watch for a long time.
- Be aware of the risk that a water resistant watch may have its water resistant performance lessened because of deterioration of the gasket, or the development of rust on stainless steel, or due to the adhesive on the glass coming loose.
- Steam, soap or some components of a hot spring may accelerate the deterioration of the water resistant performance of the watch.
- Other cautions
  - Do not disassemble or tamper with the watch.
  - Keep the watch out of the reach of babies and children. Extra care should be taken to avoid risk of injury or allergic rash or itching that may be caused when they touch the watch.
  - When disposing of used batteries, follow the instructions of your local authorities.
  - If your watch is of the fob or pendant type, the strap or chain attached to the watch may damage your clothes, or injure the hand, neck, or other parts of your body.

**Daily care**
The watch requires good daily care.
- Wipe away moisture, sweat or dirt with a soft cloth.
- After soaking the watch in seawater, be sure to wash the watch in clean pure water and wipe it dry carefully.
- If your watch is rated as "non-water resistant" or "water resistant for daily use," do not wash the watch.

**Water resistance**
Refer to the table below for the description of each degree of water resistant performance of your watch before use,

<table>
<thead>
<tr>
<th>Water resistant performance</th>
<th>Condition of use</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-water resistant</td>
<td>Avoid drops of water or sweat</td>
</tr>
<tr>
<td>Water resistant for everyday use at 5 barometric pressures.</td>
<td>The watch is suitable for sports such as swimming.</td>
</tr>
<tr>
<td>Water resistant for everyday use at 10(20) barometric pressures.</td>
<td>The watch is suitable for diving not using an air cylinder.</td>
</tr>
</tbody>
</table>
Band
The band touches the skin directly and becomes dirty with sweat or dust. Therefore, lack of care may accelerate deterioration of the band or cause skin irritation or stain on a sleeve cuff. The watch requires a lot of attention for long usage.

Metallic band
- Moisture, sweat or soil will cause rust even on a stainless steel band if they are left for a long time.
- Lack of care may cause a yellowish or gold stain on a sleeve cuff of shirts.
- Wipe off moisture, sweat or soil with a soft cloth as soon as possible.
- To clean the soil around the joint gaps of the band, wipe it out and then brush it off with a soft toothbrush.
- (Protect the watch body from water splashes by wrapping it in plastic wrap, etc.)
- Because some titanium bracelets use pins made of stainless steel, which has outstanding strength, rust may form in the stainless steel parts.
- If rust advances, pins may poke out or drop out, and the watch case may fall off the bracelet, or the clasp may not open.
- If a pin is poking out, personal injury may result. In such a case, refrain from using the watch and request repair.

Leather band
- A leather band is susceptible to discoloration and deterioration from moisture, sweat and direct sunlight.
- Wipe off moisture and sweat as soon as possible by gently blotting with a dry cloth.
- Do not expose the watch to direct sunlight for a long time.
- Please take care when wearing a watch with a light-colored band, as dirt or stains are likely to show.
- Refrain from wearing a leather band watch other than Aqua Free bands while bathing, swimming, and when working with water even if the watch itself is water-resistant enforced for daily use (100 m/10 Bar water resistant).

Polyurethane band
- A polyurethane band is susceptible to discoloration from light, and it may be deteriorated by solvent or atmospheric humidity.
  - Especially a translucent, white, or pale-colored band easily absorbs other colors, resulting in color smears or discoloration.
  - Wash off dirt in water and clean the band with a dry cloth.
  - (Protect the watch body from water splashes by wrapping it in plastic wrap, etc.)
  - When the band becomes less flexible, have the band replaced with a new one. If you continue to use the band as it is, the band may develop cracks or become brittle over time.

Note on skin irritation and allergy:
Skin irritation caused by a band has various reasons such as an allergy to metals or leather, or skin reactions against friction or dust or the band itself.

Notes on the length of the band:
Adjust the band to allow a little clearance with your wrist to ensure proper airflow. When wearing the watch, leave enough room to insert a finger between the band and your wrist.

⚠️ CAUTION ⚠️

Magnetic resistance

Affected by nearby magnetism, a watch may temporarily gain or lose time or stop operating.

<table>
<thead>
<tr>
<th>Condition of use</th>
<th>Indication or the case back</th>
</tr>
</thead>
<tbody>
<tr>
<td>Keep the watch more than 10 cm away from magnetic products.</td>
<td>No indication</td>
</tr>
<tr>
<td>Keep the watch more than 5 cm away from magnetic products, (US level-1 standard)</td>
<td>☐</td>
</tr>
<tr>
<td>Keep the watch more than 1 cm away from magnetic products, (US level-2 standard)</td>
<td>☐</td>
</tr>
</tbody>
</table>

If the watch becomes magnetized and its accuracy deteriorates to an extent exceeding the specified rate under normal use, the watch needs to be demagnetized. In this case, you will be charged for demagnetization and accuracy readjustment even if it happens within the guarantee period.

The reason why watch is affected by magnetism:
The built-in motor is provided with a magnet, which may be influenced by a strong external magnetic field.

Examples of common magnetic products that may affect watches:
- Cellular phone (speaker)
- AC adapter
- Bag (with magnet buckle)
- AC-powered shaver
- Magnetic cooking device
- Portable radio (speaker)
- Magnetic necklace
- Magnetic health pillow
AFTER-SALES SERVICE

Notes on guarantee and repair
- Contact the retailer the watch was purchased from or a SEIKO CUSTOMER SERVICE CENTER for repair or overhaul.
- Within the guarantee period, present the certificate of guarantee to receive repair services.
- Guarantee coverage is provided in the certificate of guarantee. Read it carefully and retain it.
- For repair services after the guarantee period has expired, if the functions of the watch can be restored by repair work, we will undertake repair services upon request and payment.

Replacement parts
- SEIKO makes it a policy to typically keep a stock of replacement parts for this watch for 7 years. Replacement parts are those which are essential for maintaining the functional integrity of the watch.
- When repairing your watch, please keep in mind that if original parts are not available, parts may be replaced with substitutes whose outward appearance may differ from the originals. Also note that the complete set of parts with the case or band may be replaced, or if repair is difficult, the watch may be replaced with one of equal quality.

Inspection and adjustment by disassembly and cleaning (overhaul)
- Periodic inspection and adjustment by disassembly and cleaning (overhaul) is recommended approximately once every 3 to 4 years in order to maintain optimal performance of the watch for a long time. According to use conditions, the oil retaining condition of your watch mechanical parts may deteriorate, abrasion of the parts due to contamination of oil may advance or delay the time significantly, or the watch itself may stop. As parts such as a gasket may deteriorate, water-resistant performance may be impaired due to intrusion of perspiration and moisture. Please contact the retailer from whom the watch was purchased for inspection and adjustment by disassembly and cleaning (overhaul). For replacement of parts, please specify "SEIKO GENUINE PARTS." When asking for inspection and adjustment by disassembly and cleaning (overhaul), make sure that the gasket and push pin are also replaced with new ones.
- When your watch is inspected and adjusted by disassembly and cleaning (overhaul), the movement of your watch may be replaced.
